I'm a Software Engineer in Test with nearly a decade of experience building test automation and owning quality for products at Lyft, Capgemini, and Wizeline. My work spans REST APIs, web and mobile apps, AWS and Azure cloud infrastructure, and Kubernetes operators, across the automotive, financial, transportation, entertainment, and e-commerce industries.

At Capgemini, I lead a team of 4+ testers under the SAFe framework and drive Java and Python automation for cloud landing zones, queues, lambdas, microservices, and Kubernetes custom resources using JUnit, RestAssured, and Kyverno Chainsaw. Before that, I tested iOS and Android features for Lyft's distributed team and built JavaScript and Python frameworks for frontend and backend web testing at Wizeline.

I also invest in the people around me. I led an internal project to build a shared automation framework, taught Postman and JavaScript testing courses, interviewed QA candidates, and mentored tester trainees. Working onsite with teams in Mexico, Thailand, Vietnam, Spain, and Poland taught me to ramp up quickly on unfamiliar systems and take ownership of quality end to end.

I hold a B.S. in Computer Science and Engineering from Tec de Monterrey and am ISTQB and Claude certified. I would welcome the chance to bring the same ownership and attention to quality to your engineering team.

Thank you for your consideration
